Throughout 2021, Combat Blindness International and its partners continued to face the challenge of the COVID pandemic. Despite the cloud of a pandemic, our resolve, and that of our partners, to provide quality, equitable care to so many in need remained steadfast and firm. The number of patients we have served in 2021 has doubled from the previous year and that is because of the strength and determination of our partners.

For the women in a rural village in India receiving an eye screening for the first time, for the man regaining his sight after a free cataract surgery in Kenya, for the young child whose screening and glasses allows them to see the chalkboard, and for the young woman whose education and training means she can be financially independent, we are committed to opening the doors to opportunity and hope.

In 2021, Combat Blindness International forged a collaborative partnership to create the exciting new Aadya Initiative, which provides high quality, accessible eye care to reduce preventable blindness and low vision in rural regions of low-income countries, particularly for women and children. The initiative accomplishes this by training a mobile skilled workforce of women screeners, who receive fair wages and economic opportunity. The Aadya Initiative promises to revolutionize how we deliver vision screenings and eye care in remote rural areas.

We continue to be humbled by your generosity and enthusiasm for the work of Combat Blindness International. Your support impacts people’s lives in transformational ways by giving the opportunity for life, work, education, family and community. Just imagine how you have changed a person’s world when you give them the gift of sight.

With gratitude,

Reena Chandra Rajpal, MPH

AADYA: A GAME-CHANGING INITIATIVE
During Phase II, over 99% of those screened had never before received an eye exam.

As the COVID pandemic entered a second year, Combat Blindness International and key partners met that challenge by launching a revolutionary new effort to ensure access to quality eye care in low-income rural communities.

The Aadya Initiative brings vision screeners and mobile technology to the very doorsteps of the rural poor. By training teams of women to conduct door-to-door screenings using a custom-built smartphone screening survey, Aadya is reaching significantly more people in less time than conventional screening efforts. Glasses are dispensed on the spot to those who need them, while those requiring follow-up care are referred to vision centers, the regional surgical center or the main hospital in Delhi.

At the same time, it promotes gender equity by equipping women with training, patient skills, and jobs with decent wages.

The women earn an income from their referrals and through the sale of glasses to those who can afford them.

The impact of this initiative is significant. People in remote areas get the screenings they need, and there are more screenings and referrals in less time, compared to the old approach of using vision camps. And young women with limited opportunities are empowered with medical training, employment and income.

Over 9% of those screened were referred for follow-up care, including surgery.

The Aadya Initiative evolved through CBI’s collaboration with Dr. Shroff’s Charity Eye Hospital (SCEH) in Delhi, India, and the University of Wisconsin-Whitewater chapter of Enactus, a global social entrepreneurship group. While SCEH recruits, trains and equips vision screeners, the Enactus team designed the business model enabling Aadya to be financially self-sustaining in the future.
“Building on our learnings and successes in 2021, our goal is to further optimize the Aadya Initiative, so we can reach increasing numbers of underserved people, while scaling up the program to cover larger areas and be replicated in different countries.”

Umang Mathur, MD
Executive Director,
Dr Shroff’s Charity Eye Hospital
Delhi, India
In a six month period, over 63,000 people were screened by the Aadya screeners.
TAKING A STAND AGAINST PREVENTABLE BLINDNESS
From day one, Combat Blindness International (CBI) has been dedicated to reducing the leading cause of vision loss worldwide: cataracts. **Over 100 million experience vision loss due to cataracts, and of those, more than 17 million are blind.**¹

For the vast majority of people in low- to middle-income countries where 90% of the world’s visually impaired live,² cataract surgery is too costly, or simply unavailable.

That’s why Combat Blindness International has supported free cataract screenings and surgeries as the most impactful ways to restore sight to people in these regions. Over the last 37 years, our International Cataract Program has supported **over 2.1 million adult vision screenings** and over **385,000 surgeries**.

For as little as $25, CBI provides cataract surgeries that take roughly 20 minutes, and can give someone their sight back in 24 hours. Not only is their sight restored, but people who regain their vision **generate 1,500 percent of the cost of their cataract surgery in increased productivity during the first year after their surgery.**³

For the people we serve, this means returning to work and contributing financially to one’s family. It means participating in the care of one’s family, home and community. It means the ability to gain new skills and thrive. It means the opportunity to pursue one’s dreams.

Combat Blindness International re-established its partnership in 2021 with Lions SightFirst Eye Hospital (LSEH), a well-known comprehensive eye care institution in Nairobi, Kenya. Combat Blindness International’s support for vision screenings and cataract surgeries came at a crucial time.

LSEH creatively explored new approaches to treating the underserved, mainly through its satellite facilities and local partners. As a result they were able to screen 21,761 patients and provide sight-saving cataract surgery to 999 patients in 2021.

As a hotel manager in Nakuru, Kenya, Leah enjoyed providing hospitality services to her guests and making them feel at home. But a cataract in her right eye made it increasingly difficult to do her job, and she had to rely on her son and daughter to run the business. Unable to afford surgery, Leah’s options were limited, until she received surgery at Lions SightFirst Eye Hospital, Combat Blindness International’s partner in Nairobi. With her vision and independence restored, Leah is back at work, able to see her guests’ smiling faces once again.
In 2021, Combat Blindness International continued its partnership with Jayapriya Medical Foundation (JMF), the charitable arm of Jayapriya Eye Hospital in Hubli, India.

After the successful completion of the “Mission Jyoti 1,000” initiative, a joint CBI-JMF effort providing free cataract surgeries to 1,000 people in North Karnataka, Combat Blindness International provided additional support for 1,250 free surgeries in the second half of 2021.

We look forward to further strengthening our relationship with Jayapriya Medical Foundation and continuing to provide desperately needed eye care.

“More people than ever need the strength and support of organizations like Combat Blindness International. Receiving support from CBI has allowed our hospital to say, ‘Yes!’ to one more child or adult who can be saved from preventable blindness.”

Rizwana Peerbhoy
General Manager,
Lions SightFirst Eye Hospital
Nairobi, Kenya
GIVING CHILDREN A BRIGHTER FUTURE
Fighting childhood vision loss remains an urgent priority.

Around the world, there are 90 million children and adolescents living with vision loss. Of these, 30.2 million have moderate to severe vision impairment, and given that 80% of learning takes place visually, it is crucially important to screen and treat children at an early age. Without early intervention, they will face a lifetime of barriers and lost opportunities.

That’s why Combat Blindness International has supported more than 736,000 vision screenings, over 26,500 pairs of glasses and more than 2,050 surgeries for at-risk children over the past 37 years.

During 2021, CBI’s International Pediatric Program continued to deliver quality care, including surgeries and emergency ophthalmic treatment, despite the ongoing challenges of the pandemic.

Combat Blindness International remains as committed as ever to giving children a brighter future through screenings, glasses, surgeries and continuing care.

We firmly believe that every child, no matter their circumstances, deserves to learn, thrive and pursue their dreams, free of visual disabilities.

4 IAPB Vision Atlas, 2021 
iapb.org/learn/vision-atlas/magnitude-and-projections

Life was uphill from the start for Vinod. Born with cataracts in both eyes, his future was filled with uncertainty, including limited educational opportunities, dependence on family members, and a lifetime of poverty. Fortunately, things took a positive turn at age 2, when he received free eye surgery at Usha Kiran Eye Hospital in Mysore, India, supported by CBI.

But years later, he faced another setback: a clouding of his vision due to a fine membrane over his left eye. Once again, CBI allies made it possible for Vinod to get much-needed eyecare in 2021 at Usha Kiran, resulting in restored vision. Today he is doing well, and ready to take on all that life has to offer.

“As a couple, Mark and I have been very proud to support the life-changing work of CBI for many years. We have known Dr. Chandra and his family for over 25 years! It is truly amazing that for a donation of $100, CBI can restore sight for 4 or 5 people through modern cataract surgery while building local medical capacity in developing countries. We strongly believe in the work and mission of CBI. A more impactful gift than sight is truly hard to imagine.”

Heidi Lucarelli, BSN • CBI Donor
MMSD Vision & Hearing Screening Team Substitute School Nurse
Up to 60% of children under the age of five in low-income countries die within a year of becoming blind.\(^6\)

ADDRESSING THE EYE CARE AND GENDER EQUITY GAP
In low-income countries, the severe shortage of eye care professionals is a major obstacle to providing care to those who need it the most.

It is an urgent issue particularly in India, which has the most visually impaired people in the world, and yet it has only 13 ophthalmologists per million, compared to 54.7 ophthalmologists per million in the United States.

Since 2014, Combat Blindness International has proudly supported training young women to become eye health technicians via the Certified Ophthalmic Paramedic Program (COP) at Dr. Shroff’s Charity Eye Hospital in Delhi, India. These energetic women fulfill a variety of roles, including ophthalmic nursing assistants, vision technicians, medical record administrators and patient counselors. In the process, they significantly reduce ophthalmologists’ workloads, increase the hospitals capacity to screen and treat patients and provide a more personal experience for the patient.

At same time, CBI’s support for this innovative program empowers young women with skills, employment, and a path to career advancement that typically is unavailable to them.

Delivering Care at a Critical Time

160 new students joined the COP Program in 2021, despite restrictions and challenges related to the COVID pandemic.

“Our students once again performed the role of ‘Pandemic Warriors,’” says Sunita Arora, head of paramedic training at Dr. Shroff’s Charity Eye Hospital.

In addition to their usual tasks, COP Program students and graduates monitored incoming patients for COVID symptoms, conducted rapid antigen tests, and assisted with triaged patient care.

At a crucial time when SCEH’s staff and resources were stretched to the limit by the pandemic, COP students and graduates ensured that all patients received the quality care they deserve.
Enrolling in the Certified Ophthalmic Paramedic Program has been a transformative experience for Arti (pictured), a young woman from a farming family in rural India. The oldest of three children, she originally wanted to become a teacher. But the allure of acquiring ophthalmic technical skills, earning decent wages and broadening her career options attracted her to the COP Program.

Initially, she was somewhat apprehensive when working with patients. But her confidence grew, especially after she gained more experience performing vision screenings in rural villages through the Aadya Initiative. She currently is learning to become a Medical Record and Information technician and is excited about making a difference in others’ lives.

“I never thought I could be self-reliant, but now I can fly!”

COP Technician
Dr. Shroff’s Charity Eye Hospital,
Delhi, India
“It is humbling to be part of a program that lifts these young women and gives them so much confidence. They are building their professional skills, but they are also gaining self-reliance, financial independence and an identity as a healthcare professional. For many, this is the first time that they see a future for themselves, a future that they drive.”

INNOVATIVE SOLUTIONS
Early on, we realized that reducing the cost of cataract surgery lenses was crucial to fighting blindness in low-income areas. In 1992, our innovative investment in Aurolab, in Madurai, India, lowered the cost of high-quality cataract surgery lenses from hundreds of dollars to just 2-3 dollars each.

Among the many things that set Combat Blindness International apart is our ability to develop outside-the-box solutions to the ongoing challenges of preventable blindness. While we deliver critical vision screenings, surgeries and eye care that directly impacts thousands of lives each year, we also are committed to tackling root causes through technology, partnerships and innovation.

**SUPPORT FOR CATARACT SURGERY LENSES**

In 2021, CBI donated thousands of cataract lenses to Nav Bharat Jagriti Kendra, which supports Lok Nayak Jai Prakash Eye Hospital in Gaya, India, and also to Shri Jalaram Arogya Seva Trust Hospital in Meghraj, India. These high-quality lenses were manufactured at Aurolab, a CBI-supported manufacturing facility that offers them to nongovernmental organizations at cost, for just a few dollars each.
GIVING OTHERS VISION IN SAHARANPUR

Our forward-looking collaboration with Dr. Shroff’s Charity Eye Hospital in 2007 to create a surgical center serving the rural poor is still transforming lives. In 2021, 2,429 surgeries and 14,691 vision screenings were provided to those in need at the center, located in the Saharanpur district of Uttar Pradesh, India. Saroj (pictured) was one of those who received life-changing cataract surgery after being screened at the center. Our 2021 support for a new ophthalmic microscope will benefit future patients at the center.

OUR GROWING IMPACT IN KEONJHAR

Created in 2018 through our innovative partnership with L.V. Prasad Eye Institute and the Jack DeLoss Taylor Charitable Trust, the Bijayananda Patnaik Eye Center in Keonjhar, India, continues to have a positive impact. In 2021, the center provided 17,439 vision screenings and 804 surgeries. Janaki (pictured) was among those whose sight was restored in June, after she received cataract surgery. Today, she is happily self-sufficient and able to continue earning a living.
Because you cared, 141,463 people received eye care in 2021.

For 37 years, Combat Blindness International has focused on bringing quality eye care to the most vulnerable around the world.

And you have supported us every step of the way, giving literally millions of people equitable access to vision screenings, glasses, surgeries and more, regardless of who they are, where they live, or how much they earn.

With your ongoing commitment, we can continue giving hope to people in low-income areas needlessly suffering from vision loss.

Thanks to you, we will continue to strengthen our adult cataract and pediatric initiatives in India and Africa, while expanding into new regions. We plan to empower even more women with valuable skills and a career path through the Certified Ophthalmic Paramedic Program. And we’re excited about building on the success of our exciting new Aadya Initiative, which aims to expand the reach and scale of CBI’s efforts in rural regions.

It is because of you that we are able to give so many the gift of sight, enabling them to continue working, going to school and contributing to their communities.

We are deeply grateful for your generosity and your continued support.
AMY MURRAY: WHY I JOINED CBI

Fifteen years ago my naïve view of the world changed. Even as an adult, I foolishly believed that everyone’s basic needs were met until I accompanied Combat Blindness International and its founder, Dr. Suresh Chandra, to India.

While I anticipated my journey to India to be a humbling, educational and an eye-opening experience, I did not expect the degree to which I would be affected and how that experience would change my perception of humanity. Seeing first-hand the extraordinary need for medical care, specifically eye care, exposed that there is so much more we could be doing as a nation, through the companies we work for, but most importantly, as individuals.

My time in India with CBI was primarily spent in the free clinics of the large eye hospitals. I witnessed grandparents who were able to see the smiles on their children’s and grandchildren’s faces for the first time in years after receiving sight restoring cataract surgery. However, in contrast there were times where fighting back tears of heartache was nearly impossible, like when I looked into the eyes of a child who faced a lifetime of little-to-no vision in one eye from a simple corneal ulcer. If that had been diagnosed and treated timely, it would have healed without scarring.

This is why I’ve continued to support Combat Blindness International through financial contributions over the years and why I did not hesitate to join their Board of Directors.
